Admin & Super Admin User Guide

Practical instructions for HPCC administrators. The sidebar shows only the tools permitted by your role. This guide includes all roles; some sections may not be available to you.

Website: https://hpcc-flax.vercel.app/
Admin: https://hpcc-flax.vercel.app/club-admin/login

My Profile and password changes

1. Select My Profile in the top bar. Check your email address and role.

2. Under Change Password, enter your current password.

3. Enter a different new password with 12-128 characters and enter it again in Confirm new password.

4. Select Change password and wait for the success message. Use the new password next time you sign in.

Each admin changes their own password. If you have forgotten your current password, use the password recovery process or ask the club administrator for help. Never share your password.

Find and maintain members

1. Use Status, Sort Order, Name Search or Member ID/Reference Search to find the member.

2. Select a member or use the pencil action to open their details. Maintenance controls appear after you select or search for a member.

3. Review names, contact details, membership dates and payment information before saving.

4. Use the compact row actions for editing, composing an email, checking payment, saving changes or deleting. Hover over an icon to read its label.

Pending means the membership is awaiting completion. Only verify a bank payment after checking the actual bank transaction. Deletion is permanent; check that you selected the correct person.

Membership fees and options

1. Open Membership Fees & Options and add or edit the membership choices.

2. Enter the fee, availability and validity period or end month.

3. Save the option and review the public Join page before inviting new registrations.

Fee changes apply to the configured options. Do not assume they change an already recorded payment.

Payment accounts

1. Open Payment Accounts and add the HPCC account name, code, account number and purpose.

2. Mark accounts active only when they are ready for use.

3. Select the appropriate account in each tournament before opening registration.

Use HPCC accounts only. Payment processing credentials are configured separately by the technical administrator.

Create and publish a tournament

1. Add a tournament name and select Club Calendar Event or General/Open. Club events require active HPCC membership.

2. Set dates, year, venue, rating format, time control, rounds, system and rating type.

3. Choose the payment account, entry fee and any categories. Tournament fees are separate from membership fees.

4. For a free club event, set the fee to zero and turn off Require tournament payment.

5. Set registration options and change the status to Open when registration is ready. Enable Show in Calendar when appropriate.

6. Add Vega, broadcast or PGN links when available. Check the public tournament and calendar pages after saving.

Report Absence links are available on tournament listings. Do not use a real charge to test registration.

Club calendar

1. Check the calendar title and description where offered.

2. Manage individual calendar events through the tournament records, including Show in Calendar, year and date display text.

3. Review the public Calendar after saving. Club session time is Tuesday at 7:30pm.

Tournament registrations and player reports

1. Filter registrations by tournament and the available search/status controls.

2. Review the compact report: Name, Tournament Name, Date Registered, Payment, Member ID, Status, Email, Phone and Actions.

3. Use the pencil to edit player details. Save or Cancel in the dialog; this editor cannot change fees, payment status, Stripe identifiers or tournament assignment.

4. Use Player / Vega Report for DOB, FIDE/NZCF IDs and ratings, club/school, category and contact details. It defaults to paid, confirmed registrations.

5. Export CSV or PDF after setting your filters. DOB stays in YYYY-MM-DD format; retain IDs as text when opening CSV in a spreadsheet.

6. Close PDF previews with Close, Escape or the popup backdrop.

The CSV contains player data for Vega preparation, not a verified native Vega file. Unpaid registrations can only be deleted when the linked checkout is safe to cancel; completed, paid or refunded checkouts block deletion.

Tournament results and Vega links

1. Results are stored in tournament records, not a separate hardcoded season list.

2. To capture the original HPCC results, select Preview HPCC results import. Review the tournament names, winners, scores and links.

3. Select Import and publish tournament results. Wait for confirmation that the records were saved. This imports completed results only.

4. For manual changes, edit the tournament's first/second/third-place names, Result summary, winner photo and Results URL. Use the summary for scores and shared winners.

5. Check Results and the homepage's Latest Tournament Results section. The homepage displays records with a winner or result summary.

A deployed import button does not mean the records have already been imported. The importer stops if existing result information conflicts with the source. Review that tournament before retrying.

Event photo albums, browsing and cropping

1. Choose an existing event album or All photos / new event.

2. Give every photo in the same album the same Event / album name and event date. Enter an accurate caption and description.

3. Use the photo control to browse for an image on your device. Choose a crop shape, adjust the position/zoom and select Crop & Upload.

4. Save the photo with Publish photo enabled to show it publicly. Unpublished photos remain in admin.

5. To capture the legacy prize-giving photos, select Preview prize-giving import, review all 15 captions, then select Import and publish photos.

6. The import creates Annual Prize Giving, copies images into HPCC storage and leaves the unconfirmed event date blank. Retry safely if interrupted; existing imported photos are retained.

7. Check Photo Gallery and open the album. Homepage gallery cards link to the event albums.

The legacy source URL is excluded from displayed descriptions. A photo import needs a successful confirmation before it appears publicly. Event album controls require the gallery event-name migration if the page shows a configuration notice.

Junior Chess page

1. Open Junior Chess and update session information, learning content, Junior Hour Ladder and championship/honours information.

2. Use the text controls for headings, lists and links. Use Add Photo or photo controls to browse, crop, replace or remove images.

3. Select Preview page and review the whole public layout.

4. Save changes, then check the public Junior Chess page. Preview again after further edits before saving.

Interschool Chess page

1. Update the homepage description and the school competition content in Interschool Chess.

2. Maintain the Primary, Intermediate and Secondary reports, results links, photographs and acknowledgements.

3. Use image controls to browse and crop photos rather than typing image Markdown manually.

4. Preview the page before saving; then check the homepage card and public Interschool Chess page.

Annual Poppies Chess Challenge

1. Select the event year. Use Add next year for a new edition without replacing previous years.

2. Update the event title, date, start time, venue and advertised programme. Leave unconfirmed dates or results blank.

3. Add the actual results, standings, result photographs and external results link in the results fields.

4. Use photo controls for uploads and cropping. Preview the full page, then save.

5. Review the public Poppies page and homepage description.

Keep advertised participants and actual match participants distinct when they differ. Do not invent scores or future event details.

News publishing

1. Create or edit the title, summary, content and optional image.

2. Use rich text controls for headings, paragraphs, lists and links. Check the content preview before saving or publishing.

3. Set the publication controls when the article is ready.

4. Check News and the homepage Latest News section. Social draft controls, where available, create drafts for later review.

Coaching content

1. Maintain coaches, topics, descriptions and booking/contact links.

2. Browse and crop a coach image where offered.

3. Preview rich text before saving and check the public Coaching page.

AGM notices and decisions

1. Add or edit the meeting title, date, venue, summary and attachment.

2. Preview content before publishing a meeting notice.

3. Associate decisions and elected team members with the correct meeting.

4. Record outcomes, action owners and due dates accurately; check the public AGM & Notices page.

Social posts

1. Choose the post type and intended platforms.
2. Edit the caption, image and website link, and review the preview.
3. Save the appropriate draft/status and review any separate publishing step offered.

A saved social post draft does not by itself prove the post has appeared on Facebook or another external platform.

Bulk email and tournament confirmations

1. Choose the email workflow first; only controls relevant to that workflow should be used.
2. For tournament confirmations, select the actual tournament and review the verified eligible recipients.
3. Review subject, line breaks, required placeholders and the rendered preview.
4. Send only after confirming the intended real recipients and content.
5. Use Email Diagnostics if confirmation delivery fails. Check payment before retrying a payment confirmation.

Sending email is a real action. Do not send bulk email just to test the system.

Email templates and member notices

1. Edit the relevant template or notice, including subject and content.
2. Keep required placeholders intact and use actual line breaks rather than typing literal backslash-n text.
3. Preview where available and verify that required details are filled before sending.

Email delivery diagnostics

1. Review delivery errors and configuration status for failed confirmation messages.
2. Check that HPCC's provider and sender configuration are correct.
3. Retry only the relevant confirmation after verifying the registration and payment. Avoid duplicate sends.

Live boards

1. Add or edit the event title, broadcast link and publication settings.
2. Check the public Live Boards page after saving.
3. To remove a board, select Delete once and wait for confirmation. If an error appears, read the message before retrying.

A deletion is only successful after the database confirms removal. Do not repeatedly click Delete while a request is running.

Absence reports

1. Players use Report Absence on the public tournament listings.
2. Review the tournament, player, round, date, contact details and reason in Absences.

3. Update the report status as the club handles the request.

Contact enquiries

1. Review new enquiries and the supplied contact information.

2. Follow up using the appropriate club contact process and update the status where offered.

Frequently asked questions

1. Add or edit clear question-and-answer entries.

2. Set order/publication controls where offered, save and check the public F.A.Q. page.

Club information and external configuration

1. Maintain HPCC contact information, venue/address, social links and other settings offered by the form.

2. Save and review the affected public pages.

3. Ask the technical administrator to configure HPCC's email provider, Stripe/payment credentials and optional NZ Post address lookup.

Use HPCC's own configuration and approved credentials. NZ Post lookup is optional; manual address entry remains available. Never paste secret keys into page content.

Admin users and roles

1. Review the user's identity and select the appropriate admin role.

2. Activate access only for authorised club administrators.

3. Permissions determine which menu items each person sees. Every admin role can use My Profile to change their own password.

The Users section is restricted to Super Admin. Assign the minimum access needed for the person's work.
