Deployment Guide

Technical setup and release checks for the existing HPCC application. Configuration status must be checked in HPCC accounts; no credentials are included in this document.

Website: https://hpcc-flax.vercel.app/
Admin: https://hpcc-flax.vercel.app/club-admin/login

1. Existing HPCC project

1. Use GitHub repository hpchessclub/hpcc and the existing Vercel team hpcc2 / project hpcc. Do not create another production project or modify AKCC.

2. Use the HPCC Supabase project nrnlbgwgfknwpwpuhwri. Preserve current application records, Auth users and Storage photos.

3. The production Vercel address is https://hpcc-flax.vercel.app/. The older club domain should only be switched after the club approves the replacement.

2. Environment variables

1. Set NEXT_PUBLIC_SITE_URL to the intended HPCC deployment URL. In preview environments use the correct preview URL for authentication callbacks.

2. Set NEXT_PUBLIC_SUPABASE_URL and NEXT_PUBLIC_SUPABASE_PUBLISHABLE_KEY / NEXT_PUBLIC_SUPABASE_ANON_KEY to HPCC values. The current server helper uses NEXT_PUBLIC_SUPABASE_ANON_KEY.

3. Set SUPABASE_SERVICE_ROLE_KEY server-side only. Never prefix privileged keys with NEXT_PUBLIC_ or commit secret values.

4. For payments configure HPCC STRIPE_SECRET_KEY and STRIPE_WEBHOOK_SECRET. Use test-mode credentials in an isolated test environment.

5. Choose EMAIL_PROVIDER and configure either RESEND_API_KEY or SMTP_HOST, SMTP_PORT, SMTP_SECURE, SMTP_USER and SMTP_PASS. Configure CLUB_FROM_EMAIL, CLUB_FROM_NAME and CLUB_REPLY_TO_EMAIL.

6. Optional address providers use ADDRESS_PROVIDER and approved HPCC NZPOST_CLIENT_ID / NZPOST_CLIENT_SECRET or configured alternative variables. Inspect .env.example and the provider implementation before enabling.

3. Supabase and access

1. Inspect the actual schema before applying any migration. Take an appropriate backup and review migration SQL against the current database.

2. Do not run hpcc_rebuild.sql on the existing project as a routine deployment step: it is a destructive application-table reset.

3. Gallery album grouping needs gallery_photos.event_name; if missing, review migration_v4_5_event_gallery.sql. Other features use existing tables.

4. Admin access needs a confirmed Supabase Auth user and an active public.profiles record with the correct role. Retain the existing users and IDs.

5. Set Supabase Auth Site URL and permitted redirect URLs to HPCC routes. Avoid localhost in production recovery links. Admin password changes are under My Profile.

4. Storage, email and payments

1. Check the required Storage buckets and permissions for HPCC uploads: gallery-images, news-images, tournament-images, winner-images, coach-images and agm-files as applicable.

2. Gallery imports copy source photos to HPCC Storage and create gallery_photos records. A deployment does not execute an import. Run and confirm the admin import separately when authorised.

3. Configure HPCC payment accounts before opening paid tournament registration. Verify the selected account, fee and Stripe webhook destination.

4. Verify the email sender/domain with the chosen provider. Do not use a real bulk send to test deployment.

5. Build and deploy

1. Use an isolated HPCC checkout and review the changed files. Install the pinned dependencies with npm ci when a lockfile is present.

2. Run npm run build and relevant validation tests for the changes. Keep tests isolated from live emails, payment charges and record deletions.

3. Commit only the reviewed HPCC files and push to the intended branch. Vercel builds the connected branch; monitor its status.

4. Check the current Vercel deployment and public URL after success. Deployment success does not confirm third-party email, payment or address configuration.

6. Publication and verification

1. Check homepage, Calendar, Results, Photo Gallery and admin sign-in. Confirm changes appear after refreshing.

2. Tournament results must be saved in tournaments. Use Admin Results to preview and import completed results or edit an existing record. Homepage cards need a winner or result summary.

3. Use Photo Gallery to preview and import Annual Prize Giving or upload event photos. Wait for saved-record confirmation before expecting public photos.

4. Verify each admin role can access its intended tools and My Profile. Use mocks or a dedicated test account for password checks, not another admin account.

5. If a release fails, inspect build/server logs without exposing secrets. Use Vercel rollback to a known working deployment if needed; a code rollback does not revert database changes.
